

# PADS4 Crystal CMS

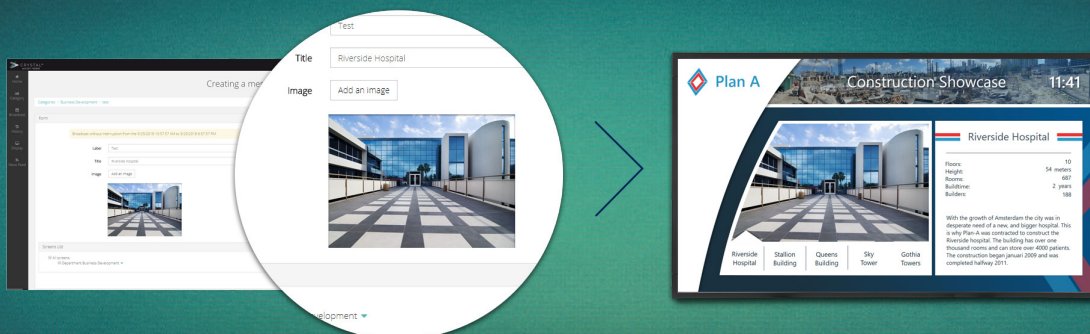

## PERFECT FOR QUICK AND INSTANT CONTENT CHANGES

The PADS4 digital signage platform is made effortless with the integration of data connections. The data you already own can easily be translated into relevant digital signage. Next to the PADS4 key features to drive data-driven and fully automated digital signage solutions, PADS4 offers a web-based CMS application to enrich your automated content within your digital signage network.

But what if your data is not automated? This does not have to be a problem. PADS4 Crystal CMS is the perfect application for ad-hoc and quick content changes, which are not data-driven.

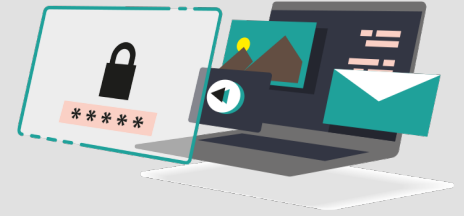

PADS4 Crystal CMS comes with a simple web-based interface with drag and drop, and is easy to use, even for persons with less technical experience. Users can design and post messages, images, and videos in a web-based application.

PADS4 Crystal CMS simplifies content management across your digital signage network. Our web-based interface makes setup and integration easy. With user profiles, controlled user rights, and a secure web portal for login from any browser enabled device, PADS4 Crystal CMS puts you in complete control of your digital signage content.

## Access PADS4 Crystal CMS anywhere

With a secured web access via internal or external portals, you can log in and create, edit, and manage display content from anywhere. Control screens and display access with display groups. PADS4 Crystal CMS makes it easy to stay in control with complete profile and access management, and scalable user licensing to support your entire team. Manage who, how, and where network administrators can change data without sacrificing local display access.
